competition with the whale oil industry, the market price of copra fell from £25 to £8 per ton between 1920 and 1935.[89]

Copra production was also severely curtailed in the early 20's by the spread of the purple moth (*Levuana iridescens*) from Viti Levu, where it had been known for at least sixty years, to Ovalau, and thence to many parts of Fiji including the Lau islands. The colonial government introduced a two-winged parasitic fly (*Ptychomyia remota*) from the Federated Malay States, which by 1929 had brought the pest under control and by 1936 had caused its almost complete extinction. Moreover, plantations were attacked by the coconut scale (*Aspidiotus destructa*), which is being successfully combated by a coccinellid beetle imported by the government from Java.

The great depression that struck the western world in 1929 did not affect Lau until 1931, but in that year the demand for copra fell away sharply. Communication with the outside world practically ceased, and most of the trade stores were abandoned. The natives suddenly found themselves deprived of the easy means of obtaining western trade goods on which they had become dependent. Their only recourse was to their old life. Neglected gardens were cleared and replanted, native crafts were revived, and inter-island trade was resumed. The southern island once more became the center of canoe building, woodwork, barkcloth, and mat making in Fiji. Involuntarily

[89] Annual copra exports from the colony since 1922 are shown in the following table:

Year	*Quantity* tons	*Total value* (£)	*Year*	*Quantity* tons	*Total value* (£)
1922	21,987		1930	23,882	369,524
1923	24,161		1931	16,917	177,786
1924	25,137	484,496	1932	15,076	170,240
1925	24,133	497,713	1933	22,597	195,788
1926	27,868	573,475	1934	23,526	125,941
1927	26,560	534,416	1935	26,081	220,478
1928	27,947	567,254	1936	34,581	406,393
1929	33,226	563,978

439 the natives regained most of their economic independence. 178 However, a few trade articles such as bush knives, metal axes, 434 trade cloth, soap, and cooking pots, have so far proved indispensable, and in 1934 enough copra was produced to exchange for these bare necessities which were still obtainable at a few centers. By this time there was no regular transportation to and from southern Lau. Most of the traveling of the natives was done by sailing canoes which had been revived. Otherwise an occasional visit by a Chinese owned trade cutter to replenish the supply of trade goods, a government ship for inspection, or a wandering scientist were the only contacts with the outside world.

731 The situation caused by the depressed market of 1931 was 439 aggravated by a hurricane which hit the Fiji islands in that 435 year. Actually the lowest point in the copra depression in 245 Fiji was not reached until 1934, when the local price fell to £3.12.6 per ton.[40] Since 1934 the price and the production of copra has increased until 34,581 tons were produced at about £9.5.4 per ton in 1936. However, the price of copra was still barely high enough to cover the cost of production.

439 It is estimated that two-thirds of the 1936 copra crop in 245 Fiji was produced by natives. This indicates that the native production of copra is increasing rapidly, but native methods of drying are primitive and tend to produce a poor quality of copra which sells at lower than market price. For some years the department of agriculture has been experimenting with small cheap types of hot air dryers in an effort to perfect a type suitable for use by native producers. A type of sawn [654] timber kiln costing from £5 to £6 was first erected for demonstration purposes at the Agricultural Station at Navuso. This kiln produces copra which sells at a premium of 10s. per ton. Under government encouragement the natives are gradually becoming interested in it and this interest is spreading throughout the Fiji group. A satisfactory kiln made of

[40] It is estimated that 50% of the crop of 23,536 tons was produced by natives.
